

# Bonington Rail Depot

This project is for a plant to maintain and repair rolling stock including a 30m spray booth. Resolving conflicting issues regarding production and process the building in its simplicity illustrates the careful analysis and resolution of such complexities into an efficient, safe and comfortable working environment.

This is typical of the type of work we have done for others such as: Glen Henderson, NATS (Prestwick) MOD, TOM VOSA, Airlink Carparks, Matthew Algje and HIE.
